#### Title: Perfect score: Sequence: Database : Post-processing: Minimum Match 0% Listing first 45 summaries Minimum DB seq length: 0 Maximum DB seq length: 1000000 Scoring table: OM protein - protein search, using sw model Searched: Run on: al number of hits satisfying chosen parameters: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. Sequences derived from porcine brain natriuretic gene can be used in part as probes to isolate similar genes from different species. Although human natriuretic related peptides (NRP) could not be isolated directly, canine NRPs could be, and these could then be used as probes to their human equivalents. Here the gene product is shown, taken from the plasmid
                                                                                                                                                                                                                                                        25-JUN-1999 (first entry)
Human gamma-BNP protein sequence.
Gamma-BNP; human; brain natriuretic cardiac insufficiency; diagnosis.

This sequence is the human gamma-BNP (brain natriuretic protein). The invention relates to an immunoassay method specific for mammalia. gamma-BNP derivatives, which comprises the use of a first antibody reacting with mammalian alpha-BNP and a second antibody with preprogramma-BNP derivatives but not with alpha-BNP. The immunoassay is use for diagnosing and monitoring heart diseases, particularly cardiac insufficiency. The technique uses only blood plasma, and is simple, stable and reliable.
                                                                                         encoding porcine brani natriuretic peptide and related human canine genes Example 1; Fig. 1; 61pp; English.

Sequences derived from porcine brain natriuretic gene can be used in part as probes to isolate similar genes from different species. Although human natriuretic related peptides (NRP) could not be isolated directly, canine NRPs could be, and these could then be used as probes to their human

CDNA encoding porcine BNP was isolated from mRNA obtained from atrial fibrillation. The nucleotide at position 170 is a pyram: The ambiguity leads to two possible protein sequences, one containing His at the corresponding site and the other containing. Tyr. The CDS is claimed.

Hamster brain derived natriuretic peptide(s) - useful for detection of BNPs, and in vaccine production Claim 1; Page 5; 8pp; Japanese.
Q73026 encodes R62682 hamster brain natriuretic peptide R62682 can be used for the detection and determination owhich is useful for various reagents and medicines.

Sequence 122 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New natriuretic and vasodilator peptides encoding porcine brani natriuretic peptide Example 4; Fig.3; 61pp; English.
Although human natriuretic related peptides directly, canine NRPs could be, and these c their human equivalents.

Isolating DNA encoding rat brain natriuretic peptide(s) treating oedema hypertension congestive heart and renal claim 1; Page 1; 7pp; Japanese.
The N-terminal Met residue is optional. Expression vector containing DNA encoding this amino acid sequence are use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A new method for the isolation of peptide(s) - comprises fusing peptide to a granule forming protein and cleaving the peptide fr the resulting fusion protein using a protease Example 2; Page 12; 17pp; Japanese.

R72812 is a gamma-IFN/glucagon/BNP fusion protein, it was used to demonstrate a new method for the isolation of peptides. The fusion protein is recombinantly produced in transformed E. coli, the glucagon/BNP is then cleaved from the granule forming protein gamma-IFN, using a protease. The glucagon can now be isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gamma-IFN/glucagon/BNP fusion protein.

The prepn. of BNP comprises: (a) obtaining a fused protein protein of formula X-Glu-BNP, where X is a leader sequence of 70-170 amino acids (R45761); (b) cleaving the fused protein with a restriction enzyme that can cleave between Glu and BNP.

This sequence represent a recombinant human brain natriuretic peptide (hBNP). This protein was encoded by the fragments of plasmids given in Q4110-04 which encode fusion peptides of murine or rat interleukin 1 (IL-1) fused to hBNP. Fusion genes of this kind can be used to express recombinant BNP which lacks the Asp-Pro N-terminal bond. The Asp residue may be replaced by Ser or may be absent.
                                                                                                                                          W70090 standard; peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (c) collecting BNP.
The BNP sequence is shown in (Q47829) and
is given in (Q47831).

This represents a brain natriuretic peptide (BNP) sequence. The invention provides a composition for treating cardiac diseases associated with cardiac hypertrophy. The composition comprises an active ingredient capable of binding to the peptide receptor of GC-A and promoting production of CGMP. The drug composition may be used clinically to treat cardiac diseases caused by cardiac hypertrophy, including chronic heart failure, ischaemic cardiac diseases and arrhythmia. The active substance can bind to the natriuretic peptide receptor of GC-A and promote production of CGMP, effectively preventing cardiac hypertrophy and leading to improvement of the pulmonary blood circulation. The substance does not affect haemodynamic properties, blood pressure, heart beat and
                                                                                                                                                                                                                                                                                                                                                                                   15-DEC-1998 (first entry)

Also new are constituents. Atrial natriuretic (ANP) and brain natriuretic (BNP) congestives are already used in treatment of various diseases, and it is believed that the lipipphilic derivatives will have similar uses. These diseases include hypertension, congestive heart failure, oedema, renaily disorders, and hepatic cirrhosis. The lipophilic group protects the congestive from metabolic breakdown, increasing the duration of action. The peptide from metabolic breakdown, increasing the duration of action. The sequence sequence represents ENP.

Disclosure; Page 9; 13pp; English.
This sequence represents Tyr-hBNP (human brain natriuretic peptide).
This peptide was used in determining the specificity of a monoclonal antibody (MAb) which recognises the C-terminal of hBNP. The MAb is produced by hydridoma BC203 (FERM BP-3515). The Tyr residue had to be added to the N-terminal of the hBNP as no other Tyr appears within the molecule and this residue was used to carry a label to allow detection of the hBNP/MAb complex.

Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

atrial natriuretic peptide precursor - horse C; Species: Equus caballus (domestic horse) C;Date: 20-Feb-1995 #sequence_revision 20-Feb-1 C;Accession: S14873
R;Maegert, H.J; Hanke, M.; Schmeding, G.; Teut submitted to the EMBL Data Library, March 1991 A;Reference number: S14872
A;Accession: S14873
A;Status: preliminary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           C;Genetics:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polylinker; plasmid DNA from the normalized library NOI_CGAP_GC4 was prepared, and as circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1257096-1258631, 145906-1470983, and 147592-1475743). Subtraction by Bento Soares and M. Fatima Bonaldo.

/note="Vector: Lambda ZAP Express; Site_1: EcoRI; Site_2:
XhoI: mRNA was purified from human fetal hearts (8-10
weeks). cDNA was synthesized using a XhoI-Oligo dT
adaptor primer. EcoRI adaptors were ligated, followed by
digestion with XhoI, for directional cloning into
predigested lambda ZAP Express."
